IQSweb Reference C

# **IQSweb Uninstallation Instructions**

11/17/2017

## IQSweb Reference C

There are two steps to completely **uninstall** any version of IQSweb. Detailed instructions follow for carrying out the 2 steps.

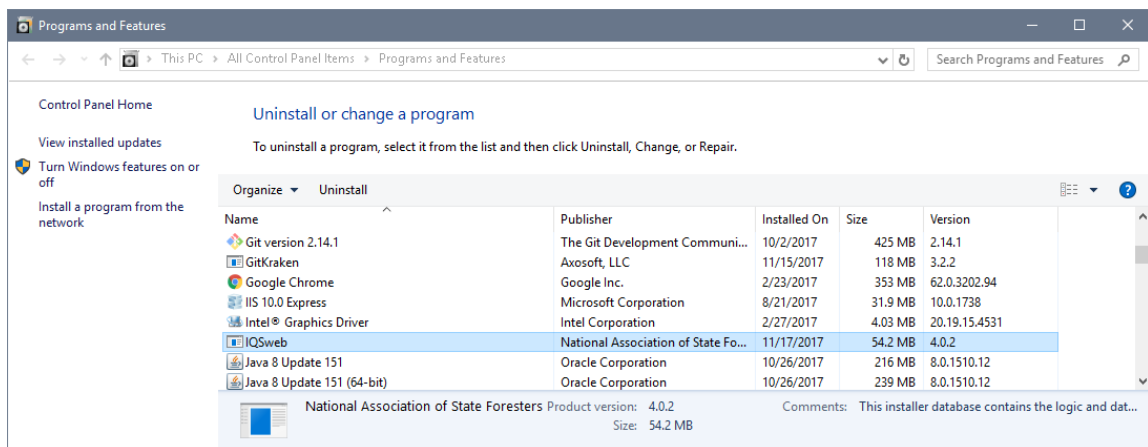

### Step 1 - Remove the IQSweb application.

### Step 2 - Remove the IQSweb database.

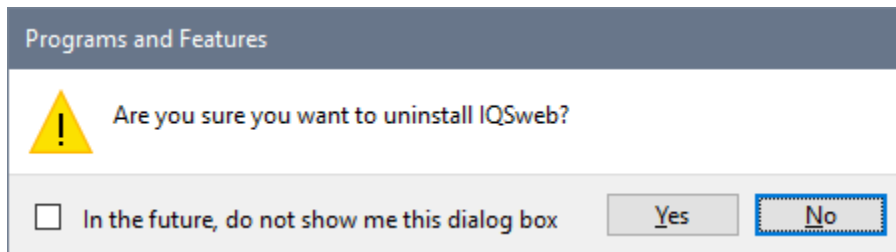

If you remove the IQSweb database, all data will be lost. Before removing the database, backup the database to preserve the data.

### Detailed Instructions for performing Steps 1 and 2:

1. To remove the IQSweb application, open the **Control Panel** and select “**Programs and Features**”.
2. Click on “**IQSweb**” and then click the “**Uninstall**” button.

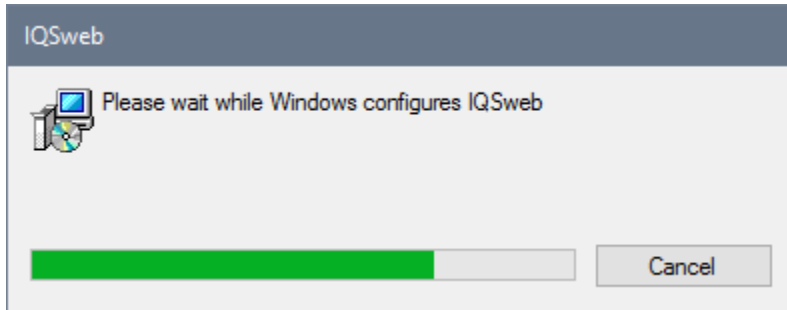

3. Click “**Yes**” to remove IQS Web.

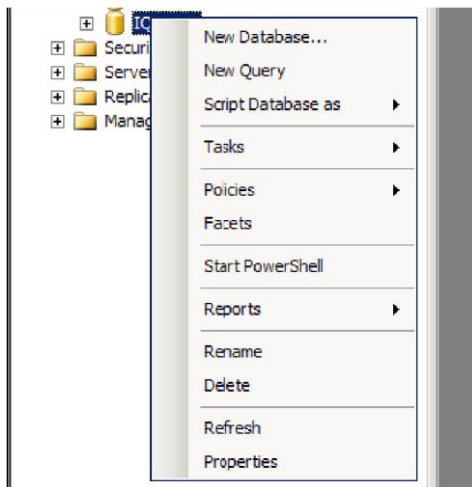

4. You will see a progress bar:

## IQSweb Reference C

5. When the un-installation is complete, the "IQSweb" entry will be removed from the "Programs and Features" screen.
6. To Remove the IQSweb database, open "**SQL Server Management Studio**".
7. Connect to the database service the IQSweb database resides on.
8. In the "**Object Explorer**", expand the list of Databases.
9. Right-click on the IQSweb database and select "**Delete**".

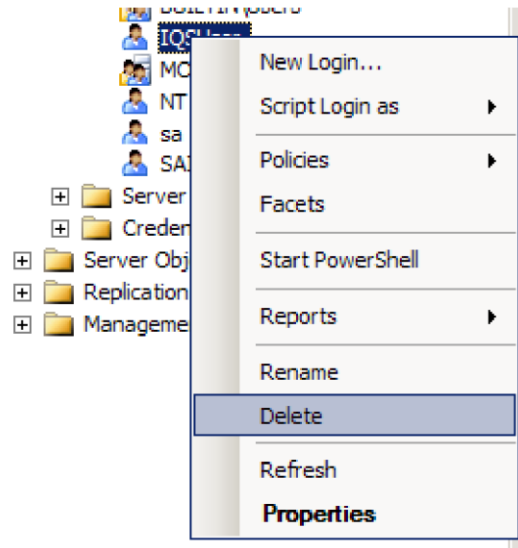

10. In the window that appears, click **OK**.

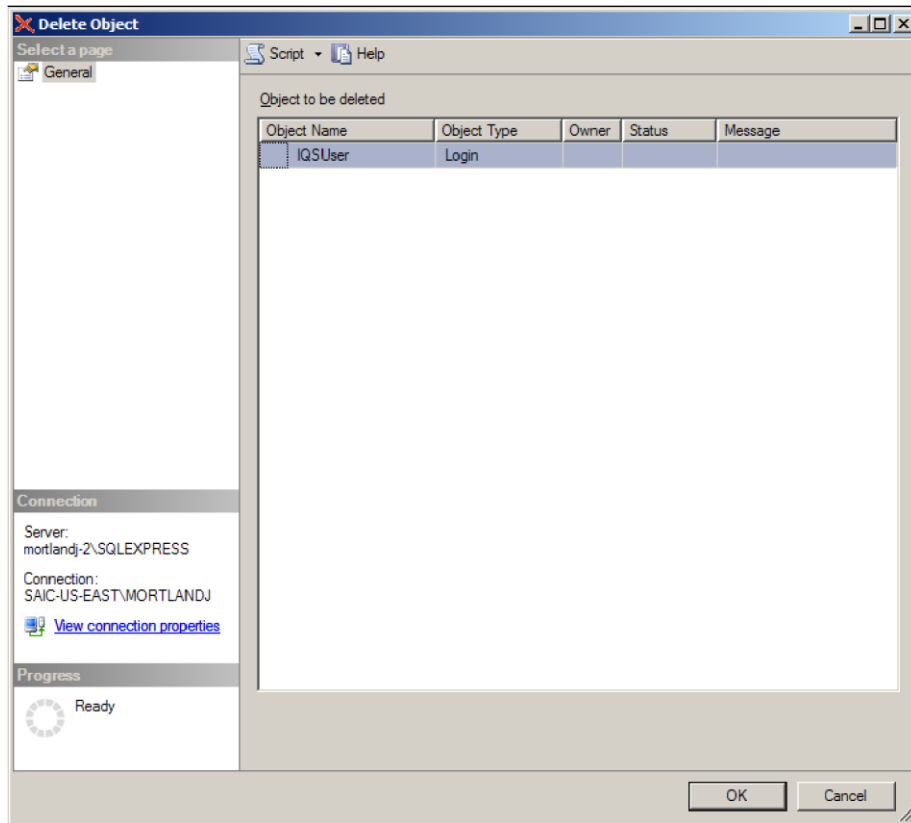

11. The IQSweb database is deleted.

12. **Optional:** Deleting the IQSweb database login.

- a. To delete the login that is used by IQSweb, in the “**Object Explorer**”, expand the “**Security**” list and then the “**Logins**” list.
- b. Right-click on the IQSweb login and select “**Delete**”.

c. Click **OK**.

d. The IQSweb database login is now deleted.

13. If you now re-install IQSweb, you will start from the beginning of the Installation Instructions, creating the database and (if you deleted the login) creating the database login.
