

IQSweb Un-installation Instructions

01/24/2012

IQSweb Reference E

There are three steps to **un-install** any version of IQSweb. Prior to installing a new version of IQSweb, you should always first uninstall the older version. Detailed instructions follow for carrying out the 3 steps.

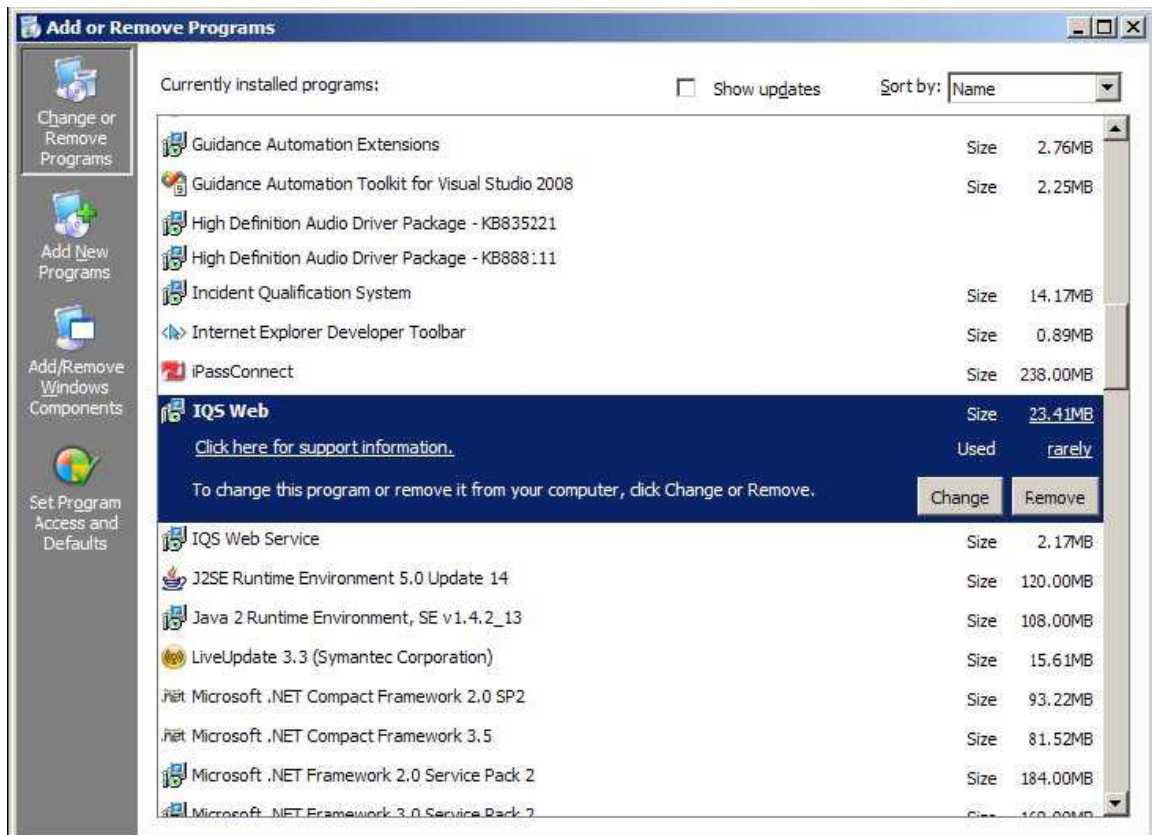

Step 1 - Remove the IQSweb application.

Step 2 - Remove the IQSweb service.

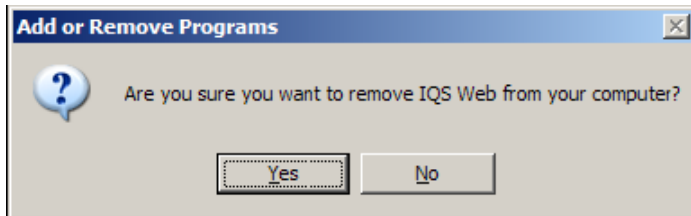

Step 3 - Remove the IQSweb database.

Detailed Instructions for performing Steps 1 through 3:

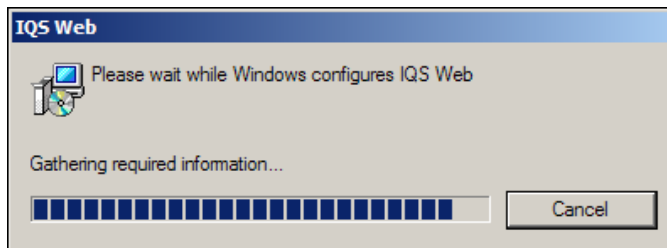

1. To remove the IQSweb application, open the **Control Panel** and select “**Add or Remove Programs**”.
2. Click on “**IQS Web**” and then click the “**Remove**” button.

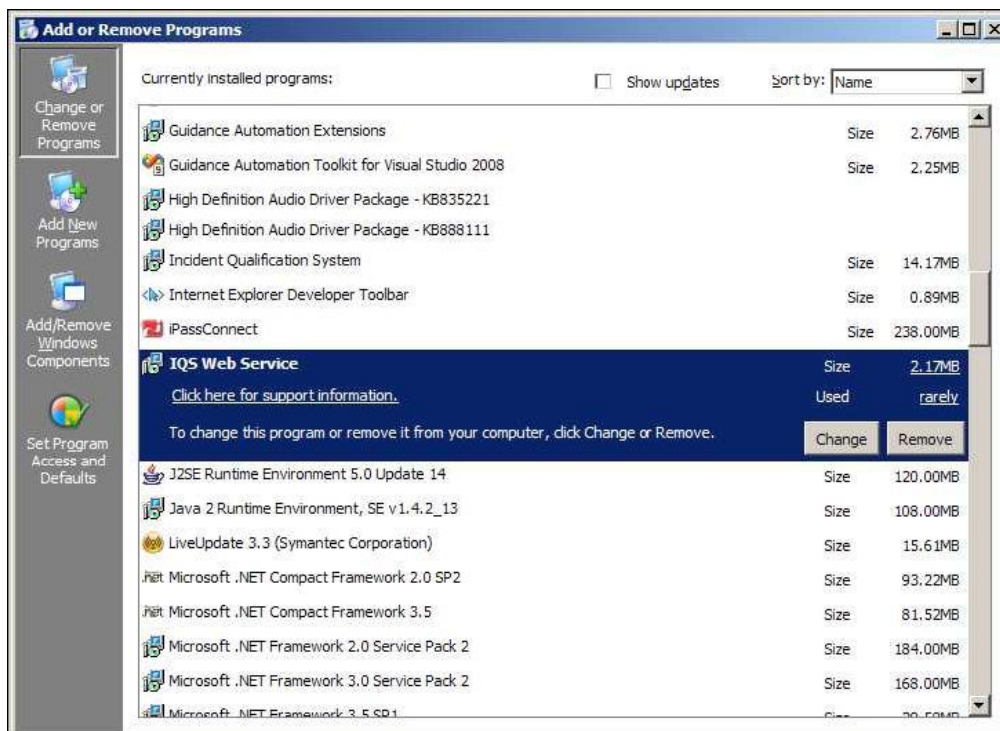

3. Click “Yes” to remove IQS Web.

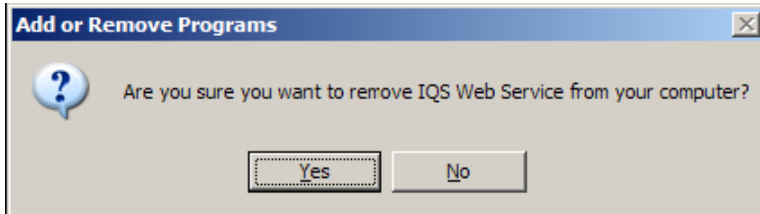

4. You will see a progress bar:

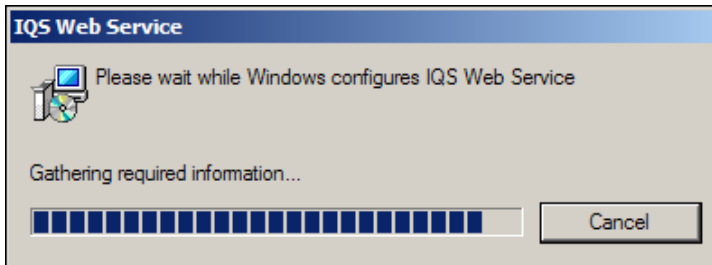

5. When the un-installation is complete, the “IQS Web” entry will be removed from the “Add or Remove Programs” screen.
6. To remove the IQSweb Web Service, click on “IQS Web Service” and then click the “Remove” button.

7. Click “**Yes**” to remove IQSweb Service.

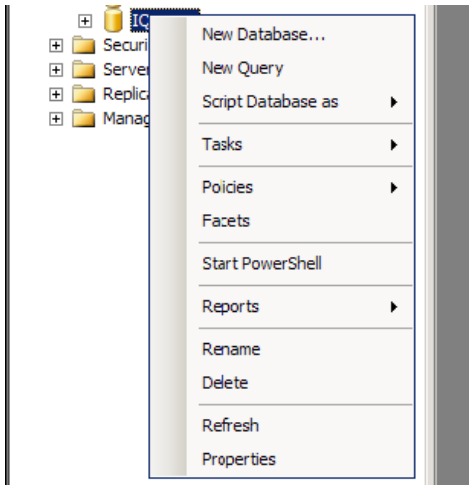

8. You will see a progress bar:

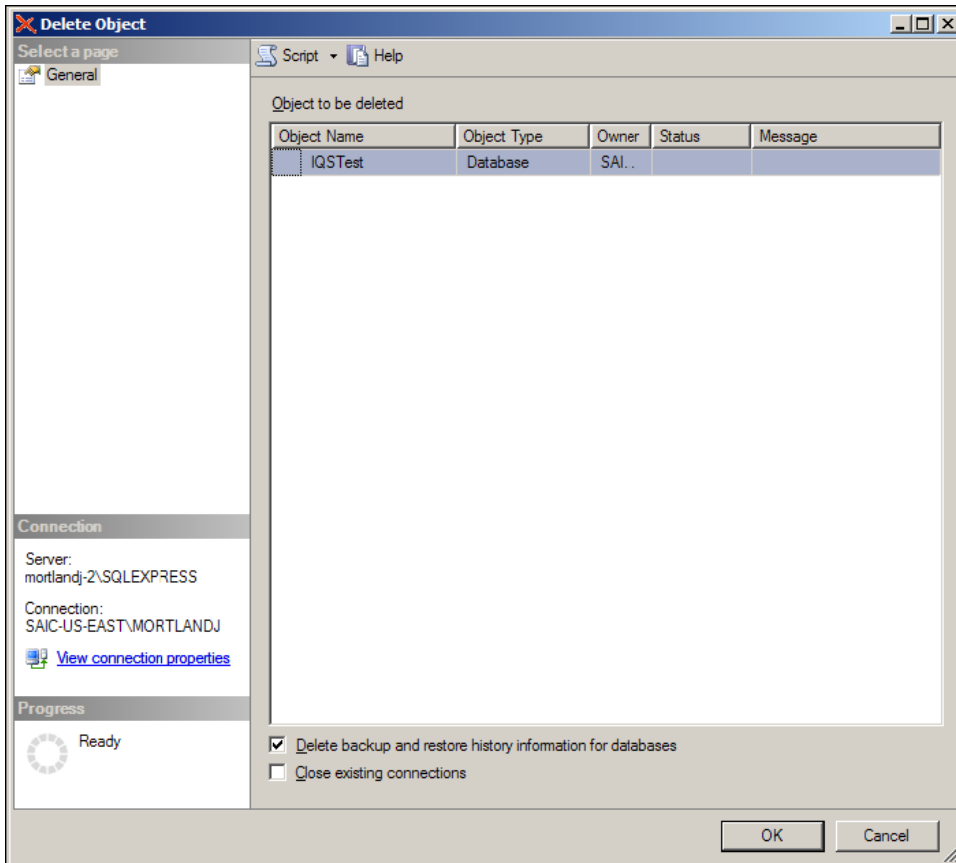

9. When the un-installation is complete, the “IQS Web Service” entry will be removed from the “Add or Remove Programs” screen.
10. Close the “**Add or Remove Programs**” window.
11. To Remove the IQSweb database, open “**SQL Server Management Studio**”.
12. Connect to the database service the IQSweb database resides on.
13. In the “**Object Explorer**”, expand the list of Databases.

14. Right-click on the IQSweb database and select “Delete”.

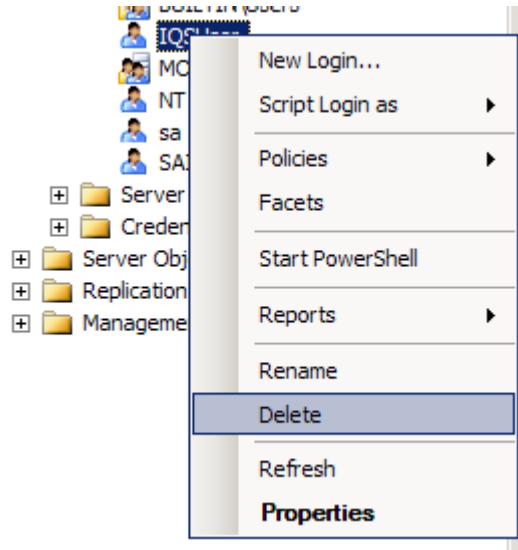

15. In the window that appears, click **OK**.

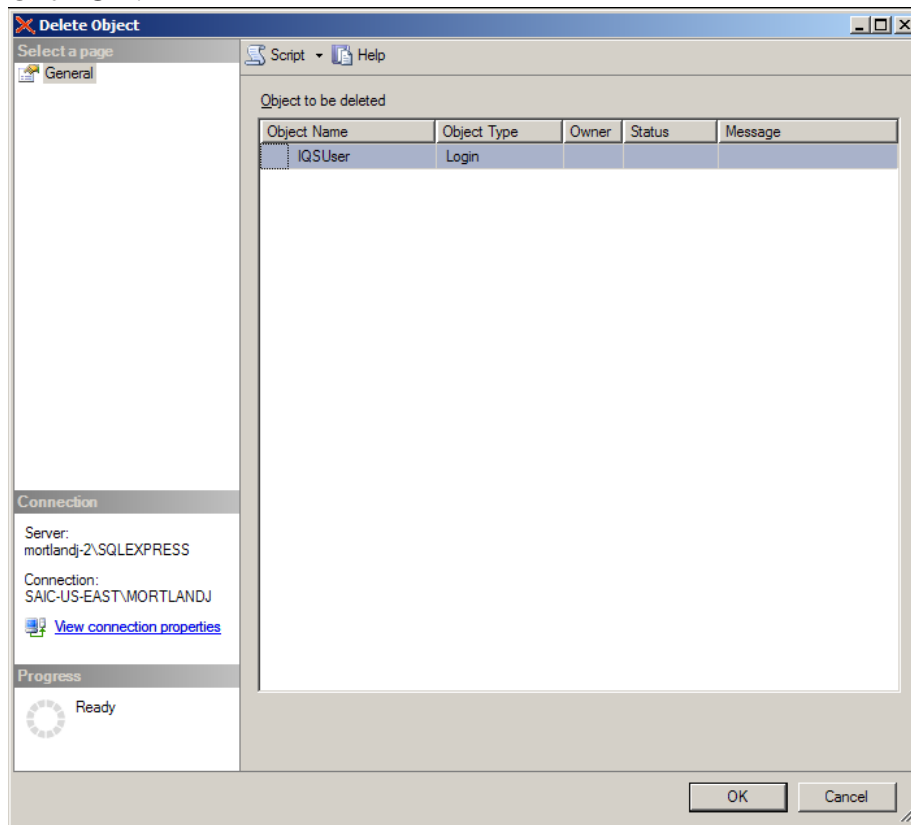

16. The IQSweb database is deleted.

17. **Optional:** Deleting the IQSweb database login.
- a. To delete the login that is used by IQSweb, in the “**Object Explorer**”, expand the “**Security**” list and then the “**Logins**” list.
 - b. Right-click on the IQSweb login and select “**Delete**”.

- c. Click **OK**.
